Overview and Conventions

This questionnaire was administered via computer assisted personal interview (CAPI) technology, meaning that the instrument was programmed onto laptops and there was no hardcopy instrument as such. This document is our best approximation of the actual survey, but necessarily shows some differences in format due to being in paper and pencil format. Thus, where you see text substitutions for gender (his/her) or tense (are/were) or names of referent persons (PARTNER1) or (MOTHER SUBSTITUTE), the actual survey did not show these same options but provided the correct option based on answers to prior questions. The CAPI program used was not able to produce a hardcopy version suitable for use as a codebook. The document you are reading was created by typing in question text from the screen dumps that the program did produce. Actual screen dumps could not be used because they contain programming language as well as the text of the question, and because response codes are in separate files and not included with the text of the question. We have done our best to catch any errors in this document; nevertheless, because it is NOT the actual instrument, some typographical errors may remain. In particular, some codes may be mistyped – our convention for the CAPI questionnaire was to code all NO answers as 0 and all YES answers as 1, but in editing this document we found some places where these codes were mistyped as 1 and 2. Similarly, the CAPI convention was to code responses to questions about genders of partners as 1 for MALE and 2 for FEMALE, but editing caught a few cases mistakenly typed in as 0 and 1. So, while we have tried to carefully check the codes, it is a long and complex instrument and typographical errors may remain. In the event you do discover an inconsistency between the range of codes printed in this manual and the range found in the data, the data are correct and not the codebook.

Throughout the codebook are bold-faced question numbers (all beginning with Q) and variable names. The “Q” question numbers refer to screens in the CAPI program. Due to substantial revision during the pretest phase, these numbers often fail to match the numbers in regular type found next to the questions. Instructions for skips typically refer to the non-bolded question numbers. Further, the section numbers do not come in orderly numerical sequence due to a decision to group all self-administered portions of the questionnaire together at the end rather than to intersperse them throughout the questionnaire as originally planned. Renumbering all the questions and sections was impractical at the time the decision was made, so the numbers remain out of sequence.

Throughout the questionnaire, all reserved codes are negative and are designated by:

-4 Legitimate Skip
-3 Missing
-2 Don’t Know
-1 Refused

The –4 code means that the CAPI program skipped the respondent past the question. The skip may be logical (we don’t ask persons who never had sex how many times they ever got pregnant, e.g.) or it may have been due to time constraints – some questions were only asked of respondents in the neighborhood samples, for example. In addition, there were a certain number of poorly programmed skips that result in missing data. The –3 code means the question is missing due to interviewer error. Because the survey was programmed, there are few cases where the interviewer could have inadvertently skipped questions, since some response was needed in order to bring up the next screen. However, in the network section,
interviewers had to perform a few manual edits on lists, and here interviewer error was possible. One common problem in this section was that interviewers failed to eliminate duplicate names listed on both the free time and discussion lists, which resulted in the collection of duplicate data. We deleted this duplicate information and substituted blanks rather than – to indicate that the interviewer error did not result in a loss of data. Further, in character fields following the choice of an “OTHER, SPECIFY” option, interviewers may have failed to enter any text specifying what the other response was. In this last case, a blank substitutes for a –3.

You should note when using these data that many questions do not have full responses from all respondents for a given item, even though all appropriate cases were asked the question. This occurs because we did not wish to ask respondents the same question more than one time. Thus, for persons who only had one sexual partner in the past year, we only ask about frequency of sex with that partner in the past twelve months and skip them past the earlier question about frequency of sex altogether in the past twelve months since these should amount to the same thing. For persons with more than one partner in the past twelve months, however, both questions are asked – frequency of sex in general in the past twelve months AND frequency of sex with each of the most recent two partners in the past twelve months. Thus, in order to construct a variable for frequency of sex in the past twelve months, you need to look at three variables: number of partners in the past twelve months (PART12), frequency of sex in the past twelve months (SEXFREQ) and frequency of sex with the most recent partner in the past twelve months (P1OFTEN). Persons with no partners in the past twelve months have a frequency of zero, persons with only one partner in the past twelve months have a frequency indicated by P1OFTEN and persons with two or more partners in the past twelve months have a frequency indicated by SEXFREQ. On the face of it, the SEXFREQ variable looks as though it will provide the measure for the full sample, but when you look at the skip pattern, you realize this is not the case. For some of the more complicated basic variables (such as relationship status at the time of interview) we have already constructed unified variables. These variables are noted as constructed variables and thus are not associated with a single question, but were constructed from a variety of items throughout the survey.

In many questions, there is an “OTHER, SPECIFY” option. The verbatim responses to these are named as variables beginning with OT and then using the CAPI screen item number, such as OT11_7F. These are character fields and contain the text typed in during the interview. All “OTHER, SPECIFY” questions have been recoded into the main variable where indicated, even where there is a response in the associated character field. For example, if somebody said “Grandfather” in an “OTHER, SPECIFY” field, but one of the original main categories was RELATIVE OF R, then this case would be moved into the RELATIVE OF R category, but the text “Grandfather” would be left in the associated OT character field. When OT fields did not provide additional information – sometimes we had responses in these fields identical to existing pre-coded categories – then the response was simply coded back into the main category and removed from the OT field. In this way, you can be confident that the distribution of the main variable reflects all the information we had from that question, including the OT fields. Please note that all “OT” variables are not included in the public use data file.

For character fields, a blank substitutes for a –3. Thus, where an “OTHER, SPECIFY” response is indicated, but there is no text in the character field that accompanies such responses, the interviewer failed to ask for or failed to enter what the specified other answer was. This means that the frequencies
in the category “OTHER” for the main variable may not match the frequencies of the OT field. There are some cases with an “OTHER” response marked that have blank OT fields. And, because some original “OTHER” responses were recoded into different response categories based on the content of the OT field, some cases without an “OTHER” response may have responses in an OT field. If there is an OT variable for one or several loops of a question, but not all loops, this means that the loops for which the OT variable is missing had no ”OTHER, SPECIFY” responses in that loop. We left the “OTHER, SPECIFY” option in this document to show where this response was allowed, but for some of these, no OT variable was created because there were no cases.

There are a number of places throughout the questionnaire where we asked for a date or an age at which something first or most recently occurred. When we gave the respondent the option of giving us either an age or a date, we later converted ages to years and years to ages so as to have these variables in both forms for all respondents with valid answers. For such variables, there are three variables for each response – one that ends in ORG, one that ends in YR and one that ended in AGE. For example, the year of most recent sex with most recent sexual partner appears as SP1MRORG SP1MRYR and SP1MRAGE. The “ORG” variable tells you how this information was originally collected, as age or year. The YR variable is a combination of years originally collected and ages collected and converted into years. The AGE variable is a combination of ages originally collected and years collected and converted into ages.

These data were collected from five separate samples: Cook County, Shoreland, L-Side, Erlinda and Southtown (community area names are pseudonyms). The variable SAMPLE shows 6 codes, designating which respondents lived in the City of Chicago proper and which lived in Suburban Cook County. These two groups were drawn as a single sample, however. It is useful to have a dummy variable that distinguishes between suburban and city residents, but the cases in samples 1 and 2 are not individually representative of Suburban Cook County and the City of Chicago respectively; rather, they are jointly representative of residents of Cook County as a whole and should be used as a single sample.

The variable SAMPWGT is a raked case weight. This means that it both corrects for sampling bias and weights the cases to match census percentages of males and females of various age groups and by race/ethnicity. Since women respond to surveys at a higher rate than do men – we got about 60% women and 40% men – a weighting procedure was needed to make the cases representative of the underlying population. This weight was calculated in such a way as to preserve the correct number of actual cases. The four neighborhood samples were simple random samples of households, while the cross-section was a clustered sample. The variable ELIGIBLE gives the number of persons aged 18-59 living in the household.

Throughout the survey, the convention for interviewers was that items printed in upper/lower case were to be read aloud, while those in ALL CAPS were not to be read aloud, but were instructions to interviewers. To distinguish between the instructions to interviewers (ALL CAPS) and the text of the questionnaire (upper/lower case), both of which appeared on CAPI screens during the interview, and the codebook notes that did not appear in the original CAPI interview, the latter are in italics. Nothing in italics was part of the text of the original CAPI questionnaire.

The CAPI survey was programmed by CHRR at Ohio State University. Programming errors resulted in the
loss of data at various points in the questionnaire and this is noted in the codebook.

To prevent inadvertent disclosure of respondent identity, a number of variables have been excluded from the public use data file. Information about obtaining access to these restricted variables can be obtained by contacting the Social Science Research Computing Center Data Archive at the University of Chicago (datahelp@src.uchicago.edu or (773)-834-0150).

PART 1: THIS IS PART ONE -- DEMOGRAPHY

Before we begin, I want to verify that I have your correct address. Is your address: 
ADDRESS_________________________________  
CITY_____________ STATE_______ ZIP_______________

INTERVIEWER: VERIFY STREET ADDRESS AND MAKE ANY NECESSARY CHANGES.

Hello, my name is ________________ and I'm with the National Opinion Research Center at the University of Chicago. You have been selected to participate in an important study of health and social life in Chicago and its suburbs. This study will help service providers better understand critical social and health-related issues surrounding sexual behavior, such as the spread of the deadly disease called AIDS.

There is a great need to know more about the social and sexual behavior of persons living in urban areas. We need information from people of all walks of life. You have been scientifically selected for this survey to represent Chicago area residents like yourself. Your participation is voluntary, but in order to accurately represent the varied experience of Chicago area residents, we cannot substitute anyone else for you.

Your answers will be strictly confidential. The scientists at the University need your answers for statistical purposes and cannot link the information back to you, ever. Your willingness to answer these questions thoroughly and honestly is very important to the public health of the nation in general and Chicagoans in particular.

First we will start with some basic information about you.

[THE ACTUAL CAPI SURVEY NOW GOES DIRECTLY TO QUESTION 1, GENDER. THE FOLLOWING BASIC VARIABLES WERE AUTOMATICALLY GENERATED OR CONSTRUCTED LATER]

CASEID = Case ID number
ELIGIBLE = Number of eligible persons in the household (number of persons age 18-59)
SAMPWGT = Raked case weight, correcting for sampling and weighting cases to conform to census distributions of gender, race/ethnicity and age by tract
BEGIDAY = Day interview begun
BEGIMTH = Month interview begun
BEGIYEAR = Year Interview begun
STIME = Starting time of the interview
ENDTIME = ending time of the interview
SAMPLE = Which Sample R is in  
1 = City of Chicago  
2 = Suburban Cook County  
3 = L-Side  
4 = Southtown  
5 = Shoreland  
6 = Erlinda

*NB:* DEGREE includes information recoded in from Q1-60b and Q1-61. ONLY persons answering Q1-58 as vocational/technical degree (2), or refused (-1)/don’t know (-2), were asked Q1-60b and Q1-61. This was done to discriminate between the wide-ranging types of degree that are designated as vocational or technical. Persons who completed a high school degree AND a vocational/technical degree BUT NOT a 4-5 yr college degree (BA or BS) were left in the vocational/technical category of DEGREE. Persons without a high school degree were coded into less than high school and persons with a college degree were coded into bachelor’s degree. This preserves the rank order of the variable categories. The additional variable VOCATION, is a 0/1 variable indicating whether or not a respondent answered with option 2 to the original Q1-58 question. To see the original combinations of vocational and academic degrees, crosstabulate DEGREE with VOCATION.

PART 2: THIS IS PART TWO -- LISTING OF 2 MOST RECENT PARTNERS

(Q2-intro1) (Q2-intro2) (Q2-intro3) (Q2-intro4)
Now I am going to be asking some questions about your sexual activity over the course of your life. People mean different things by sex or sexual activity, but in answering these questions, we need everyone to use the same definition. Here, by "sex" or "sexual activity", we mean any mutually voluntary activity with another person that involves genital contact and excitement or arousal; that is, feeling really turned on, even if intercourse or orgasm did not occur.

In answering these questions, please include all persons or times where you had direct physical contact with the genitals (the sex organs) of someone else and sexual excitement or arousal occurred. Certain activities such as close dancing or kissing without genital contact should not be included. Also, this set of questions does not refer to occasions where force was used and activity was against someone's will.

(Q5-4C) INTERVIEWER: PLEASE ENTER A 1 IN THE BOX OF THE FREE TIME PERSON WHO MATCHES (NAME(S) OF PERSON/PEOPLE MARKED IN Q5-4). (THIS PERSON WAS ENTERED ON THE DISCUSSION ROSTER AND R INDICATED HE/SHE WAS ALSO ENTERED ON THE FREE TIME ROSTER)

(Q5-5H) COMBINED ROSTER: NPNAME1 NPNAME2 NPNAME3 NPNAME4 NPNAME5 NPNAME6
NUMMALE Number of males in network
NUMFEM Number of females in network

FREEDISS Constructed variable: Number of non-overlapping network people named. The interviewer manually eliminated duplicate names to create a single, non-duplicate list of all persons named as free-time or discussion partners. Thus, it was subject to error. A -3 code here means that a non-duplicate name was erroneously deleted from the combined list. A -4, conversely, means there is legitimately no person in the slot. Because of the way this was done, network persons are not necessarily in the expected slots. That is, if there is 1 freetime or discussion partner total, that person is most likely in the 1st network person slot, but MAY BE in the 2nd or 3rd slot. Similarly, if only 2 people are listed, they may be in the 2nd and 3rd slots, rather than the 1st and 2nd slots. And so on.

INTERVIEWER: BELOW IS AN UPDATED ROSTER. IF ANY PERSON IS INCORRECT, <PG UP> TO PREVIOUS QUESTIONS AND ENTER CORRECT INFORMATION OR PRESS <ENTER> TO CONTINUE.

INTERVIEWER: IF R INDICATES A PERSON, MOVE THE CURSOR TO THE LINE OF THE PERSON AND PUT 1 IN PARENT BOX. WHEN THE ONE OR TWO PEOPLE R INDICATES HAVE BEEN MARKED, PRESS THE <ENTER> KEY TO CONTINUE.

NB: THERE IS A SERIOUS PROGRAMMING ERROR AT THIS POINT. PERSONS DESIGNATED AS PARENTS ACCORDING TO THE NPPARNT VARIABLES ARE SKIPPED OUT OF ALL REMAINING NETWORK QUESTIONS EXCEPT WHETHER OR NOT THIS PERSON CONSIDERS HIM/HERSELF TO BE GAY. FURTHER, IT IS UNCLEAR HOW NPPARNT STATUS WAS ASSIGNED, AS THESE VARIABLES DO NOT MATCH THE MAWHO AND PAWHO QUESTIONS IN THE EARLIER SECTION OF THE QUESTIONNAIRE. BASED ON RELATIONSHIP CODES, IT IS CLEAR THAT NOT ALL NETWORK PERSONS ASSIGNED AS NPPARNT WERE REALLY PARENTS OR PARENT SUBSTITUTES FOR R.

FOR EACH PERSON (ON BOTH GENERATORS) AND WHO IS NOT R'S PARENT, ASK Q109 and Q110 OTHERWISE, SKIP TO Q110.

AT THIS POINT, THE PROGRAM ERRONEOUSLY SKIPS ALL PERSONS DESIGNATED AS 1 IN NPPARNT VARIABLES TO NPGAY.

PART 3.5: THIS IS PART 3.5 – DOMESTIC VIOLENCE

The questions in this short section are to be completed by you without the interviewer, unless you have questions. Please read the instructions in the following screens, before you begin to answer the questions. Once you have selected or entered your answer, the machine will automatically go to the next question.

(SAQ3.5–INTRO2)
The first thing you will need to do is to "TURN ON" each screen. To do this simply press the [DOWN ARROW] key, located in the lower right hand corner of the keypad. This will allow you to select or enter an answer to the question.

(SAQ3.5–INTRO3)
1. This is a practice question. Try to use the [DOWN ARROW] key to "TURN ON" the screen so that the first response is highlighted. Then use both the [DOWN ARROW] and [UP ARROW] keys to move up and down through the response list. Once you have moved the highlighting to the line you wish to select as your answer, press <ENTER> to continue to the next question.
(SAMPLE RESPONSES)
Every day
Several times per week
Once or twice a month
Less often

(SAQ3.5–INTRO4)
If you do not know an answer or do not wish to answer a question, press <F6> for DON'T KNOW or <F5> for DO NOT WISH TO ANSWER. These keys are at the top of the keyboard.

(SAQ3.5–INTRO5)
Some questions in this section you may have answered earlier. Sometimes people find it easier to answer some questions on their own instead of saying them to another person. In thinking about these questions, you may also have remembered activities or events you didn't mention.
Persons who answered yes to either P1AGAIN or P2AGAIN (they expect to have sex with either of two most recent partners again), and those who answered yes to MAYBESEX (they were currently in a relationship they expected would become sexual soon, but had never had sex yet) answered questions in this section. All others were skipped.

(SAQ3.5-1)
1. Conflicts and disagreements occur in all relationships. Here is a list of things you or your spouse or partner might have done when you had a conflict or disagreement. Think only about the most recent 12 months you were involved with (MOST RECENT, CURRENT SEXUAL PARTNER). When you and (PARTNER) had a conflict or disagreement, did you or (PARTNER) ever do the following:

(SAQ3.5-1A) VIOLNT1
A. Argued heatedly but short of yelling
   1 you only did this
   2 your partner only did this
   3 both you and your partner did this
   4 neither you nor your partner did this
